CFU: Non-invasive technological innovation, able to act at depths previously only achievable by surgery.

CENTERLESS: SELECTIVE THERMAL EFFECT

The ultrasonic wave emitted by the centerless transducer flows precisely into the point of focus, where it reaches a temperature above 65°C, necessary to promote the contraction of collagen fibres without damaging the skin on the surface.

CFU EASYZOOM

Easy focalization system that concentrates the ultrasonic energy precisely in the skin layer to be treated, at the desired depth, generating a regenerative thermal energy.

EXCLUSIVE DESIGN

The unique ergonomic design of the cartridge makes work easier, allowing wide visibility and accurate precision on the emission zone. The different application modes simplify operation.

EASYFLOW RAPIDITY OF EMISSION

The EASYFLOW technology emits a succession of focused energy points at high speed and at different frequencies, allowing to speed up the procedure considerably.

Treatment indications.

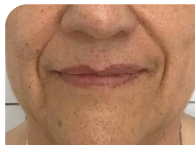

At **BIOTEC ITALIA**, protocols are tested by a team of Specialists and Opinion Leaders in over 60 countries worldwide. **CFU ÈLIFE** is part of a family of products verified and clinically tested to offer safe and effective treatments.

MEDICAL TREATMENT INDICATIONS

- Treatment of hyperhidrosis.

AESTHETIC TREATMENT INDICATIONS

- Skin firming and skin rejuvenation.
- Soft lifting effect of the face and neck.
- Skin laxity on the face, neck and décolleté.
- Reduction of periocular and naso-labial wrinkles.
- Treatment of scars due to acne.

All the answers you are looking for.

WHAT DOES TREATMENT WITH CFU ÈLIFE CONSIST OF?

CFU ÈLIFE is a safe and non-invasive method for treating skin ageing and reducing the depth of wrinkles in the face, neck and décolleté area.

CAN IT REPLACE A FACELIFT?

CFU ÈLIFE works on the deepest layers of the skin but cannot replace the results of a facelift. However, it is a viable alternative, especially for those who are not ready for surgery or for patients seeking to prolong the effects of cosmetic surgery.

WHAT CAUSES THE AUTOLOGOUS COLLAGEN PRODUCTION PROCESS?

The transducer/cartridge used, focuses the ultrasound energy deep into the skin at a sufficient temperature for the process of collagen regeneration to begin, a natural process known as neocollagenesis. CFU ÈLIFE does not require the use of substances, creams, fillers or other infiltration products.

HOW LONG DOES A TREATMENT LAST?

The duration of the treatment depends on the extent of the area to be treated and the characteristics of the patient. A face and neck procedure typically takes 20-60 minutes.

DOES THE TREATMENT REQUIRE RECOVERY TIME?

CFU ÈLIFE does not require recovery time. Immediately after the procedure, normal activities can be resumed without any special precautions.

WHAT DO YOU FEEL DURING THE TREATMENT?

Tolerance levels for the treatment vary from person to person, but a slight pain sensation, similar to a puncture, is only felt when the ultrasound focuses its beam on the clotting point.

You can trust Biotec Italia.

A SOLID COMPANY

Since 1993, Biotec Italia combines a strong technological know-how with a strong scientific vocation and a natural predisposition for the generation of aesthetic well-being. Designing, manufacturing and marketing technological devices for the aesthetic medical sector and products related to high-profile cosmetics, all this is a real mission for Biotec Italia. Based in Dueville (VI) and London, Biotec italia is one of the main players in the sector.

100% MADE IN ITALY

The entire production process, from design to assembly and quality testing, is absolutely Italian. To the warranty of technological excellence, Biotec combines the punctuality and competence of its after-sales service, the professionalism of the Biotec Italia Academy specialists, leaders in the scientific field, and the irrefutable effectiveness of the sales and marketing training given to Biotec clients.

FROM PROJECT TO REALISATION

From conception to design, up to production and after-sales. A brilliant R&D department, an innovative anecoical testing chamber and efficient production and logistics facilities are essential for developing the heart of the activity: research, innovation and application, all managed and controlled by the group in the Italian headquarters in Dueville (VI).

CERTIFICATIONS AND GUARANTEES

Biotec Italia has achieved double certification recognition: both the authoritative ISO 9001, to guarantee the company's absolute compliance with the strict regulations in force in Italy, and the "CE" marking to confirm the technological efficiency of its machinery.
